## Project Description

**Fourteen organisations** from the UK and France, including research laboratories, companies, several NHS trusts, economic clusters and health science networks, are coming together to launch the ADAPT project that will tackle **mobility problems** faced by **elderly and disabled people** by developing **innovative Assistive Technologies**:

- > a smart and connected Electronic Powered Wheelchair
- > an Electric Powered wheelchair simulator based on the recent progress made on Virtual Reality.

Additionally, the project will fill the gap in the actual healthcare training programs by developing **training materials and sessions** to engage more efficiently the healthcare professionals with the use of Assistive Technology solutions.

Finally, the project will create a **leverage effect on the economic development** of the cross-border region by transferring the ADAPT results to commercial undertakings in order to generate supply and manufacture, and generate jobs in the regions.

Budget received from the France (Channel) England Programme:  
**€6.6 million ERDF**

Project Duration  
**6 years**  
(2016-2022)

Total Project Budget  
**€9.8 million**
